NOCO2

PRESS RELEASE : [NOCO2.org](https://noco2.org): Plant Trees and Stop Global Warming

16 November 2022

What do we want from COP27? What are we willing to do to help?

Some progress in stopping global warming was achieved at COP26 in Glasgow. But, sadly, progress since then has been very poor.

Instead of focusing on action to help all, many Governments have prioritized action to seek to grow their own economies or to protect citizens from cost-of-living increases.

With World Leaders gathering for COP27, people are asking: **what do we want from COP27?** What is possible? Is 1.5C still alive?

Now people have heard about what needs to be done, but they haven't done it. Instead, we are all facing catastrophic global warming – What are we willing to do to help?

1.5C Max

1.5C is still critically important. It needs to be the critical test for all policies and actions Does the action help to achieve 1.5C? if not, then the action needs to be reworked until it does

Are Organizations doing what they said they'd do?

Many actions were agreed at COP26 or previously. But are these actions happening? At COP27, it's time to hold to account ALL organizations for what they have already agreed.

Agreements such as to keep global warming “well below 2C” to cut the use of fossil fuels, to stop deforestation by 2030, to protect of 30% of land and seas by 2030, to cut methane by 30% by 2030 etc.

Yes, we need solutions to the Economic Crisis, the Energy Crisis and the Cost-of-Living Crisis. But the smart opportunity is to make green solutions part of these.

CHOOSE to stop Climate Change:

7 years after the Paris Agreement, why is there still so little progress? Because instead of on track for 1.5C, the world is still on track for 2.7C

Why? Because the forces of vested interests, greed and self-interest are so strong. But together we can stop it. By focusing our campaigns at all levels: Government, Big Business, Small Business, and Individuals – people like us

Simple Solutions for us all:

- Use less energy at home
- Travel consciously
- Eat more plant-based meals
- Hold Governments and organizations to account
- What we buy – support low environmental impact solutions
- Remove our Carbon Footprint by Planting trees – 250 trees remove around 1 Metric Ton of CO2-equivalent per year (1000 kgCO2e/yr.)

NOTES TO EDITORS

About n0co2.org

n0co2.org to make it easy for people to take action to stop global warming by planting trees.

We have planted over 1,500,000 trees 🌳🌳🌳

We also make it easy for small businesses to go Net Zero, with an easy-to-use template and inspirational message about the opportunity for businesses to be green and be seen to be green.

Whether for business, Government, or to offset air travel, planting trees is still by far the lowest cost way to remove CO2 emissions. By incorporating Carbon Credits we are now creating solutions that deliver potentially high returns for Investors and life-transforming impact for local communities.

n0co2.org is a project of the International NGO Saving Our planet www.savingourplanet.net
